

statistical tests

Sample t

sample t

- 1) 28K
- 2) 35K
- 3) 18K
- 4) 50K

$$\begin{aligned} \text{Mean} &= \frac{28 + 35 + 18 + 50}{4} = 34K \\ \text{Standard Deviation} &= \sqrt{\frac{(28-34)^2 + (35-34)^2 + (18-34)^2 + (50-34)^2}{4}} = 32K \end{aligned}$$

Two tail

$$\begin{aligned} H_0: \text{sal} &= 27K \\ H_A: \text{sal} &\neq 27K \\ &= 27K \end{aligned}$$

2-tail test.

H_0 :- The avg sal of IT Emp is 27K.
 H_A :- No. ... is not 27K.

1 sample t test - Numerical data
depends on proportions, Countinuous

The avg sal of IT Employee is 30K.

$\rightarrow H_0$: more than 70% of people are married in india.

H_A : No more than 70% of people are not married in India.

$$\left. \begin{array}{l} H_0: p \geq 70\% \\ H_A: p < 70\% \end{array} \right\} \text{one tail test.}$$

1 sample

1) Yes

2) Yes

3) No

4) Yes

5) No

10) Yes

60% Yes :- Married

40% No :- Unmarried

1 sample proportion test

categorical data (Yes/No)

dependent on population

$\rightarrow H_0$:- Covidshield is better than Co-vaxin
 H_A :- No covidshield is not better than Co-vaxin

Covidshield

Sample 1

1) 2hr

2) 4hr

3) 1.5hr

4) 3hr

5) :

50) 5hr

Co-vaxin

Sample 2

1) 3hr

2) 6.5hr

3) 4hr

4) 5hr

5) 7hr

$\overline{7.2 \text{ hr}}$

avg $\frac{35 \text{ hr}}{\checkmark}$

2 Sample t test

Independent on population

so, we have to accept H_0

Bcz, we got 5.5 hr reaction time for covid shield
7.2 hr for co-vaxin.

H_0 : New Beauty treatment is better than older one.
 H_A : No the New Beauty treatment is not better than
older one.

New	Old	<u>2 sample proportion</u>
<u>Sample 1</u>	<u>Sample 2</u>	
Yes	Yes	
No	Yes	
Yes	No	
No	Yes	
:	Yes	
Yes	No	
No		<u>80% Yes</u>
<u>50% Yes</u>		<u>20% No.</u>
<u>50% No</u>		

we can reject the H_0
Bcz 80% of people like older treatment

H_0 : From New weight loss program you can significant difference in your weight.

H_A : No, there is no significant difference
in your weight.

Sample 1

<u>Before</u>	<u>After</u>
78	65
93	81
110	90
	88

ii) 90

:

:

16) 85

68 }

First 4, we can accept
the H₀ bcz majority of
weight loss

1 Sample paired t-test

t test

→ H₀: My batch students can't able to score > 90m
H_A: My batch students are able to score > 90m

Ex:

B1	B2	B3	B4	B5
63	75	92	47	81
62	88	98	58	75
58	83	88	63	78
73	65	89	70	85
80	73	95	68	70
<hr/>				
avg:-	65	78	92	79
<hr/>				

Q

Anova

Analysis of Variance

If one sample proved means we can reject
the H₀.

Ex:- In the 2000 Indian census the age of individual
in a small town were found to be the following.

In the year 2000

Less than 18	18 - 35	> 35
20%	30%	50%
